

# Rechargeable Glowballs

**Charging** - You can charge up to 5 balls at once on each charger pack, and you can daisy-chain up to 4 packs together on a single power supply for a total of 20 balls charging at once! The barrel plug on the charger pack is used for daisy-chaining.

Charging time ranges from 1-2 hours for a quick “top off” up to about 8 hours for a full charge. **DO NOT LEAVE BALLS ON THE CHARGER FOR MORE THAN 12-14 HOURS!** This will greatly reduce battery life.

In an emergency, balls can be “zip charged” by plugging them directly into the power supply for **NOT MORE THAN 2 MINUTES**. This type of charging is not recommended as it also reduces battery life.

**Cycling** - About once a month, deep-cycle your batteries by allowing them to drain completely, then charge them up to full again. This helps them perform better and last longer.

**Cleaning** - Use mild soap and a damp cloth, or a small amount of vegetable oil on a dry cloth. Do not immerse the balls in water.
